
Norwegian Special Mission signs contract with NATO Supply and Procurement Agency - NSPA to supply one Automatic Flight Inspection Systems for the Spanish Air Force

In August 2016, **Norwegian Special Mission** signed a contract with NSPA to supply one **UNIFIS 3000** Automatic Flight Inspection System, and to provide for its installation into a Spanish Air Force Cessna **Citation V**.

This new UNIFIS 3000 will be the second in the fleet of the Spanish Air Force. The first UNIFIS 3000 was installed in the same aircraft type and set into operation in 2009.

The flexibility and ease of operation of the UNIFIS 3000 will allow for interchangeability of the systems in both aircraft. This provides for high utilization during maintenance schedules and operational flexibility.

The new installation will also allow the aircraft to quickly change between three operative roles of Aerial Photographic, VIP passenger transport and Flight Inspection.
